LEARNING OBJECTIVES

- Participants completing this course will be able to:
- 1) outline the neurologic, genetic, and social mechanisms of opioid abuse, especially in relation to the nationwide, opioid health emergency.
 - 2) list diagnostic signs and psychological "red flags" common in opioid abuse and opioid overdose.
 - 3) review the current guidelines for the use of opioids in patients with acute and chronic pain.
 - 4) list the parameters of opioid use and abuse to be documented in all clinical, dental, and health care settings.
 - 5) explain opioid replacement therapy (e.g., methadone, buprenorphine) and the use of opioid antagonists in acute overdose.
 - 6) describe the risks and toxicities (inclusive of accidental overdose in first responders and health-care professionals) of fentanyl and derivatives, as well as over-the-counter abusable drugs.
 - 7) describe the short-term and long-term neurologic, psychosocial, and metabolic effects of cannabis (marijuana) use and outline these effects in relation to opioid abuse, pain inhibition, and the modulation of neurotransmitters.
 - 8) list the subterfuges aimed to prevent the CDC (Center for Disease Control and Prevention)-mandated detection of drugs of abuse and the methods for reduction of false positives and false negatives.
 - 9) describe how the information in this course can be utilized to improve patient care and patient outcomes.
 - 10) describe, for this course, the implications for dentistry, mental health, nursing, and other healthcare professions.
